CONTENTS

Volume II, Issue Nos. 1–6

International Journal of
QUANTUM CHEMISTRY

Issue No. 1, January

Editorial 1

Information for Contributors Page 3

Hirotoshi Ito and Y. J. I'Haya: The Electronic Structures and Spectra of Proflavine, Acridine Orange, and Their DNA Complexes 5

John R. Sabin: Hydrogen Bonding in Simple π-Electron Systems. I. Pyridinium–Pyridine 23

John R. Sabin: Hydrogen Bonding in Simple π-Electron Systems. II. Pyridine–Pyrrol. 31

Erkki Brändas: Scaled AMO Calculations on the Hydrogen Molecule. II. The $1s\sigma 2p\sigma\ ^1\Sigma_u^+$ State. 37

Chr. Klixbüll Jørgensen: Might the Difference Between Schrödinger and Ruedenberg's Local Contributions to the Kinetic Energy Represent Elastic Deformations of the Electron. 49

G. Diercksen: Über eine Näherung zur Lösung des "Self-Consistent-Field" Verfahrens für Systeme mit ungepaarten Elektronen. I. Die Methode . . 55

Rolf Manne: A Note on Kaufman's Overlap Population Criterion for Molecular Stability 69

Jaroslav Koutecký and Sydney G. Davison: Electronic States of General Mixed Crystals. 73

Franklin Prosser and Stanley Hagstrom: On the Rapid Computation of Matrix Elements 89

W. A. Bingel: Improved Lower Bounds for the Convergence Radius of RS-Perturbation Theory 101

Marten J. ten Hoor: The Ground State of Atomic Two-Electron Systems in the Independent Particle Model 109

Robert Rein, Pierre Claverie, and Michael Pollak: On the Calculation of London–Van der Waals Interactions in a Monopole-Bond Polarizability Approximation with Application to Interaction Between Purine and Pyrimidine Bases 129

K. Sundaram and William P. Purcell: Molecular-Orbital Calculations on Some Mesionic Compounds 145

R. Janoschek, G. Diercksen und H. Preuss: Wellenmechanische Untersuchungen an der "Wasserstoffbrücke zwischen zwei Berylliumatomen . . 159

Robert B. Hermann: Molecular-Orbital Calculations on Electrophilic Substitution and Relative Basicities in Pyrrole, Indole, Furan, and Benzofuran 165

Announcement: 179

Announcement: 181

Issue No. 2, March

P. Sen and S. Basu: Free-Electron Model and Triplet-State Lifetime of Benzene. 183

R. McWeeny and W. Kutzelnigg: Symmetry Properties of Natural Orbitals and Geminals. I. Construction of Spin- and Symmetry-Adapted Functions 187

J. D. Vaughan, D. C. Fullerton and C.-A. Chang: Semiempirical Molecular-Orbital Calculations of the Basicities of Pyrazole, Imidazole, and Methyl-Substituted Pyrazoles and Imidazoles: Inductive Method of Electron Release 205

F. Martino: Localized Impurity States in the Hartree–Fock, LCAO Approximation. I 217

F. Martino: Localized Impurity States in the Hartree–Fock, LCAO Approximation. II. The *F* Center in KCl 233

H. K. Shin: Inelastic Molecular Collisions with an Orientation-Averaged Interaction Energy 265

P.-S. Song: Electronic Structures and Spectra of Halogenated Purines and Pyrimidines. II. π-Electronic Structure of 2-Chloropurine and its Related Derivatives 281

P.-S. Song: Electronic Structures and Spectra of Halogenated Purines and Pyrimidines. III. σ-Electronic Structure and Some Comments on the Mechanism of the Xanthine Oxidase Reaction of 2-Halopurines and Related Analogs 297

B. Levy and G. Berthier: Generalized Brillouin Theorem of Multiconfigurational SCF Theories 307

Announcement. 321

Book Received. 323

Issue No. 3, May

D. C. Jain and R. C. Sahni: Transition Probabilities for the Ionization of N_2, O_2, NO and CO Molecules 325

A. M. Ermolaev and G. B. Sochilin: $2\,^3S$ State of Helium 333

Z. Gershgorn: Proofs of the Linear Independence of Properly Selected Projected Spin Eigenfunctions 341

Peter Schnupp: On the Total Number of Atomic Associations of an N-Atomic Molecule 349

Kenichi Fukui and Tokio Yamabe: A Note on the Theory of Interatomic Long-Range Forces 359

Robert Benesch and Gulzari Malli: X-Ray and Electron Scattering Factors for Many-Electron Atomic Systems 371

Erkki Brändas: Scaled AMO Calculations on the Hydrogen Molecule. III. The $1s2s^3\Sigma_g^+$ State. 391

Osvaldo Goscinski and Oktay Sinanoğlu: Upper and Lower Bounds and the Generalized Variation-Perturbation Approach of Many-Electron Theory . 397

A. P. Jucys, V. A. Kaminskas, and V. J. Kaveckis: Application of the Extended Method of Calculation for Atoms and Ions Having the Electronic Configurations $1s^22s^22p^N$. 405

H. D. Försterling and H. Kuhn: Projected Electron Density Method of π-Electron Systems. II. Excited States 413

Books Received 431

Issue No. 4, July

I. Tamir and R. Pauncz: The Spin Degeneracy Problem in the AMO Method. 433

C. George: Note on the Usual Perturbation Theory. 445

Z. Silberman, Z. Gershgorn and R. Pauncz: Application of the AMO Method to Non-Alternant Systems 453

Pill-Soon Song: A Theoretical Consideration of the Spectral Properties of Flavin Tautomers and Imino Flavins 463

W. Kolos: Recent Developments in the Theory of One- and Two-Electron Molecules 471

K.-F. Berggren and B. Johansson: A Field Theoretical Description of States with Different Orbitals for Different Spins 483

D. E. Ramaker, G. L. Hagnauer, R. E. Carlson, R. F. Gaetano, H. Crain, and D. M. Schrader: Helium States. II. Perturbation Treatment of the Ground State Using the Coordinates $r_<$ and $r_>$ 509

O. Chalvet, R. Daudel, C. Ponce and J. Rigaudy: Mechanism of Photo-oxidation: Interpretation of the Substitution Effects in the Photooxidation of Acenic Derivatives 521

W. Kutzelnigg and V. H. Smith, Jr.: Open- and Closed-Shell States in Few-Particle Quantum Mechanics. I. Definitions 531

V. H. Smith, Jr. and W. Kutzelnigg: Open- and Closed-Shell States in Few-Particle Quantum Mechanics. II. Classification of Atomic States . 553

Errata 563

Issue No. 5, September

J. B. Moffat and H. E. Popkie: Physical Nature of the Chemical Bond. II. Valence Atomic Orbital and Energy Partitioning Studies of Linear Nitriles . 565

P. Schnupp: The Calculation of Atomic Associations Using LISP . . . 599

C. A. Coulson and R. B. Gerbers Effects of Complex-Valued Electronic Wave Functions on Nuclear Motions 607

H. Fröhlich: Long-Range Coherence and Energy Storage in Biological Systems. 641

H. Preuss: Das SCF–MO–P(LCGO)-Verfahren und seine Varianten. . . . 651

Richard E. Brown and Harrison Shull: A Configuration Interaction Study of the Four Lowest $^1\Sigma^+$ States of the LiH Molecule 663

Purnendranath Sen and Sadhan Basu: Free-Electron Model for Hyperpolarizability of the π-Electron System in Benzene 687

G. A. Gallup: Factorization of the Secular Determinant by Constants of the Motion 695

R. Janoschek: Wellenmechanische Absolutrechnung an einer intramolekularen Radikalreaktion an einem methyl- und hydroxylsubstitutierten ungesättigen Kohlenwasserstoff 707

Jean-Louis Calais: Derivation of the Clebsch–Gordan Coefficients by Means of Projection Operators 715

Michael T. Marron and John H. Weare: A Variation Principle for Energy Differences between States of Two Different Hamiltonians 729

Letter to the Editor: William J. Taylor: Uniqueness of Parseval's Formula and Born's Hypothesis on Probability Densities in Quantum Mechanics . . 735

Book Received. 739

Issue No. 6, November

A. Pipano and I. Shavitt: Convergence Studies in Configuration Interaction Calculations 741

Z. Gershgorn and I. Shavitt: An Application of Perturbation Theory Ideas in Configuration Interaction Calculations 751

Osvaldo Goscinski: Upper and Lower Bounds to Polarizabilities and Van der Waals Forces. I. General Theory 761

G. Heldman: On the Formulation of Spin-Free Quantum Chemistry . . 785

Erkki Brandas: Scaled AMO Calculations on the Hydrogen Molecule. IV. General Remarks 793

Arthur M. Lesk: Computation of Derivatives for Parameter Optimization in Least-Squares Fitting of Linear Combinations of Slater-Type Orbitals by Gaussians 801

M. Carpentieri, L. Porro and G. Del Re: Numerical Studies for a Theoretical Analysis of Semiempirical LCAO–CI Methods 807

C. A. Coulson and G. Doggett: The Electronic Structure of Tetrahedral III–V Compounds: The Ground State of Boron Nitride 825

Osvaldo Goscinski and Yngve Öhrn: Coupling of Equivalent Particles in a Field of Given Symmetry 845

P. Modrak: Self-Consistent-Field Method Including Correlation Effect for Atomic Systems. Three- and Four-Electron Atomic Systems 857

Per-Olov Löwdin: Studies in Perturbation Theory. XIII. Treatment of Constants of Motion in Resolvent Method, Partitioning Technique and Perturbation Theory 867
